DOGM  
MINERALS PROGRAM  
FILE COPY

I just received a call from Cindy Beem, DAQ, 536-4072. Her supervisor is Jeff Dean. She is looking into the Lime Ridge operation to determine what type of permitting may be needed. DAQ's records list a Bluff sand and gravel operation, but currently have no permitting information on the Lime Ridge operation. DAQ has record of a Notice of Violation issued in 1985 to Mr. Holliday requiring water sprays on crushers, a water tank and pump on site, and minimization of fugitive emissions to less than 40 percent. A key issue for DAQ is how long the crusher has been at the Lime Ridge site and whether the crusher was moved from a site which was permitted, or if it was moved from a site which was grandfathered (crusher operating prior to 1969). I told her of the permitting history of the site according to our files, and described the source and amount of dust observed during our inspection. I forwarded her call to John Blake of State Lands for information on dates of operation/royalties. She will copy DOGM on any correspondence sent out to Jerry Holliday.

A COPY OF THIS HAS BEEN SENT TO FILE S/037/081
